

# Search sheets: how to run the activity

The pages after this one are 30 **search sheets**, built from *The Cat in the Hat* by Dr Seuss. Print them one-sided and hand out **one sheet per person** — every sheet is different, and nothing needs cutting out.

Each sheet holds 65–66 **token pairs**. A **token** is one word or one punctuation mark; a token pair is a **next token** paired with the **previous token** that came immediately before it somewhere in the original text.

In **your mother**, the boxed token is the previous token and *mother* is the next token. Each token keeps the same colour wherever it appears, so scan by colour first and read second. With only 11 colours and far more tokens than that, a colour narrows the search rather than settling it — always check the token itself.

Say the colour when you call a token out — “who has *mother*? it’s a purple one” — and the room can find the swatch before reading a word:

**black red brown ochre green teal blue navy violet purple wine**

## Running a round

1. **Call out the last token** of the text so far.
2. Everyone scans their own sheet for token pairs whose previous token matches. **Hands up** — one hand each, and anyone with more than one match just goes with the first they spot.
3. **Pick a raised hand at random** and ask for that token pair’s next token.
4. A scribe writes the token on the board. That token becomes part of the context for the next round. Repeat.

## Worked example

**Start anywhere.** Pick any token pair — say this one — and write its previous token *and* its next token on the board.

**Round 1.** Call out the last token on the board (**mother**). Another sheet has a match, so that person raises a hand and reads out *was*.

**Round 2.** Call out the last token on the board (**was**). Another sheet has a match, so that person raises a hand and reads out *gone*.

Keep going for as long as you like. The text the room writes will sound like *The Cat in the Hat* without ever repeating it — that is the model generating, not the corpus being read out.

Picking at random matters. If you take whoever shouts first you are sampling the fastest reader, not the text — and the whole point is that the room samples the way the model does.

## What to watch for

**The hands are the probability distribution.** Every token pair was dealt to exactly one person, and the deal spreads each context across as many people as it will go, so a common continuation really does put more hands in the air than a rare one. Nobody has to explain weighted sampling; the room performs it. (Roughly: for a context more common than the class is big, somebody holds two matches but raises one hand, which flattens the busiest contexts.)

**Nobody holds the model.** No single sheet can continue the text on its own. The model only exists across the whole room — and if somebody is away, their share of it is missing, and some contexts will draw no hands at all.

**Running dry.** If no hands go up, you have reached a context that only ever occurred at the very end of the text. Start again from any token pair.

1962 tokens, 240 unique · 2.83 bits/token · perplexity 7.1 · branching factor 4.32

*the token pair that answers*

**your mother**

**mother was**

**was gone**

*on the board*

your mother

your mother was

your mother was gone

When the token called out matches the boxed token of a token pair below, raise your hand, and read out that token pair's **next token** if you're picked. If more than one token pair matches, just go with the first one you spot. (A token is one word or one punctuation mark.) For example, if the token called out is "your", then the token pair **your** mother is a match and you answer **mother**.

| <b>did</b> <b>!</b>       | <b>and</b> <b>he</b>     | <b>I</b> <b>will</b>     | <b>like</b> <b>this</b> |
| <b>so</b> <b>all</b>      | <b>is</b> <b>not</b>     | <b>shame</b> <b>!</b>    | <b>that</b> <b>is</b>   |
| <b>I</b> <b>let</b>       | <b>said</b> <b>the</b>   | <b>the</b> <b>hat</b>    | <b>a</b> <b>game</b>    |
| <b>!</b> <b>it</b>        | <b>on</b> <b>the</b>     | <b>bump</b> <b>!</b>     | <b>not</b> <b>know</b>  |
| <b>of</b> <b>bad</b>      | <b>fox</b> <b>,</b>      | <b>!</b> <b>how</b>      | <b>.</b> <b>your</b>    |
| <b>do</b> <b>.</b>        | <b>can</b> <b>hold</b>   | <b>,</b> <b>said</b>     | <b>not</b> <b>fly</b>   |
| <b>bow</b> <b>.</b>       | <b>in</b> <b>this</b>    | <b>let</b> <b>down</b>   | <b>now</b> <b>!</b>     |
| <b>top</b> <b>with</b>    | <b>.</b> <b>then</b>     | <b>box</b> <b>.</b>      | <b>cat</b> <b>.</b>     |
| <b>,</b> <b>out</b>       | <b>here</b> <b>.</b>     | <b>it</b> <b>deep</b>    | <b>and</b> <b>I</b>     |
| <b>was</b> <b>too</b>     |                          |                          |                         |

When the token called out matches the boxed token of a token pair below, raise your hand, and read out that token pair's **next token** if you're picked. If more than one token pair matches, just go with the first one you spot. (A token is one word or one punctuation mark.) For example, if the token called out is "on", then the token pair **on this** is a match and you answer **this**.

| <b>. I</b>            | <b>what a</b>       | <b>one !</b>    | <b>the wall</b>     |
| <b>, said</b>         | <b>said the</b>     | <b>, we</b>     | <b>do !</b>         |
| <b>! now</b>          |                     |                 |                     |

When the token called out matches the boxed token of a token pair below, raise your hand, and read out that token pair's **next token** if you're picked. If more than one token pair matches, just go with the first one you spot. (A token is one word or one punctuation mark.) For example, if the token called out is "you", then the token pair **you** **another** is a match and you answer **another**.
